DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Ernst (4,951,399).

3. Regarding to claimed invention, Ernst teaches a measuring device for measuring position indication and the detection of guidance errors comprising a graduation (Ta) in a graduation plane (TFa) of the graduation carrier (TTa) which is connected to one of the objects as to claimed position measuring graduation arranged in a position measurement direction; the claimed first and second guidance error measuring graduation arranged perpendicularly with respect to position measurement graduation, Ernst teaches guide surface perpendicular to the graduation surface of the graduation carrier, and comprising a guide coupling perpendicular to the direction of measurement to connect the guide elements. Ernst further discloses position indication scanning unit movable with respect to the scale such as scanning unit (A), see at least abstract and col. 2, lines 36-63. With regard to claimed elements such as scanning unit comprises light source that emits beams of light, a retro-reflection component and a detector element, Ernst discloses that in order to scan the graduation TTa, the scanning unit comprises arrangement that is known to those skilled in the art, a scanning plate AP
